

SENDGRID INTEGRATION WITH PYTHON

Date	Oct 2022
Team ID	PNT2022TMID10745
Project Name	CUSTOMER CARE REGISTRY

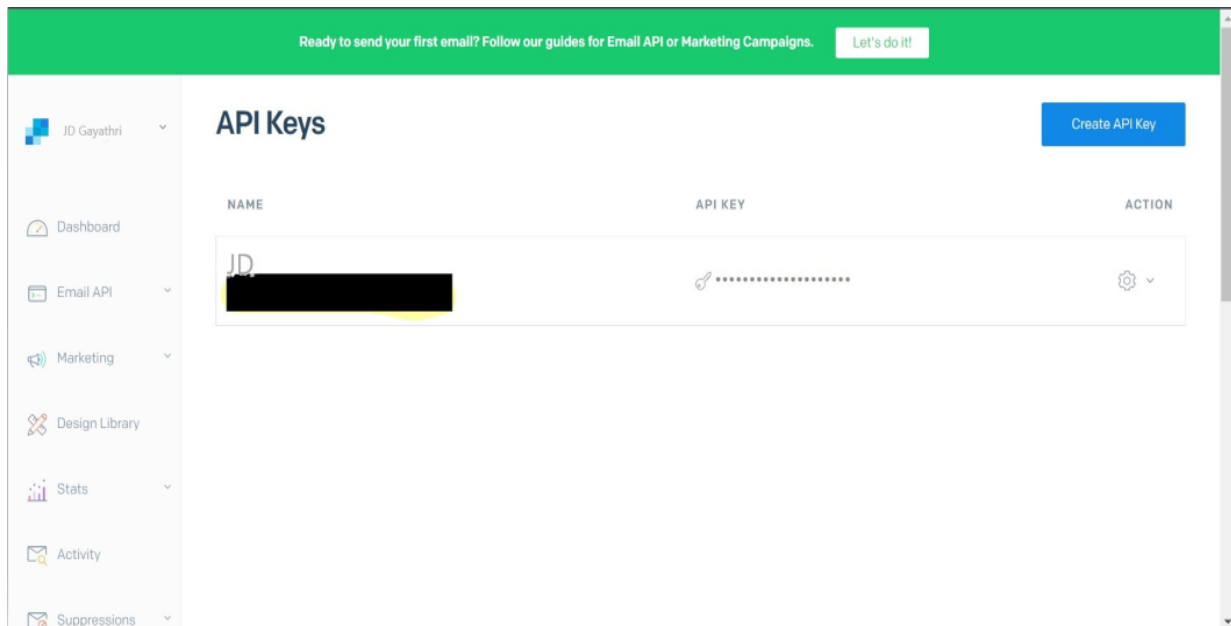

STEP 1:

REQUIREMENTS:

Python 2.6, 2.7, 3.4 or 3.5.

STEP 2:

Create an API key

STEP 3:

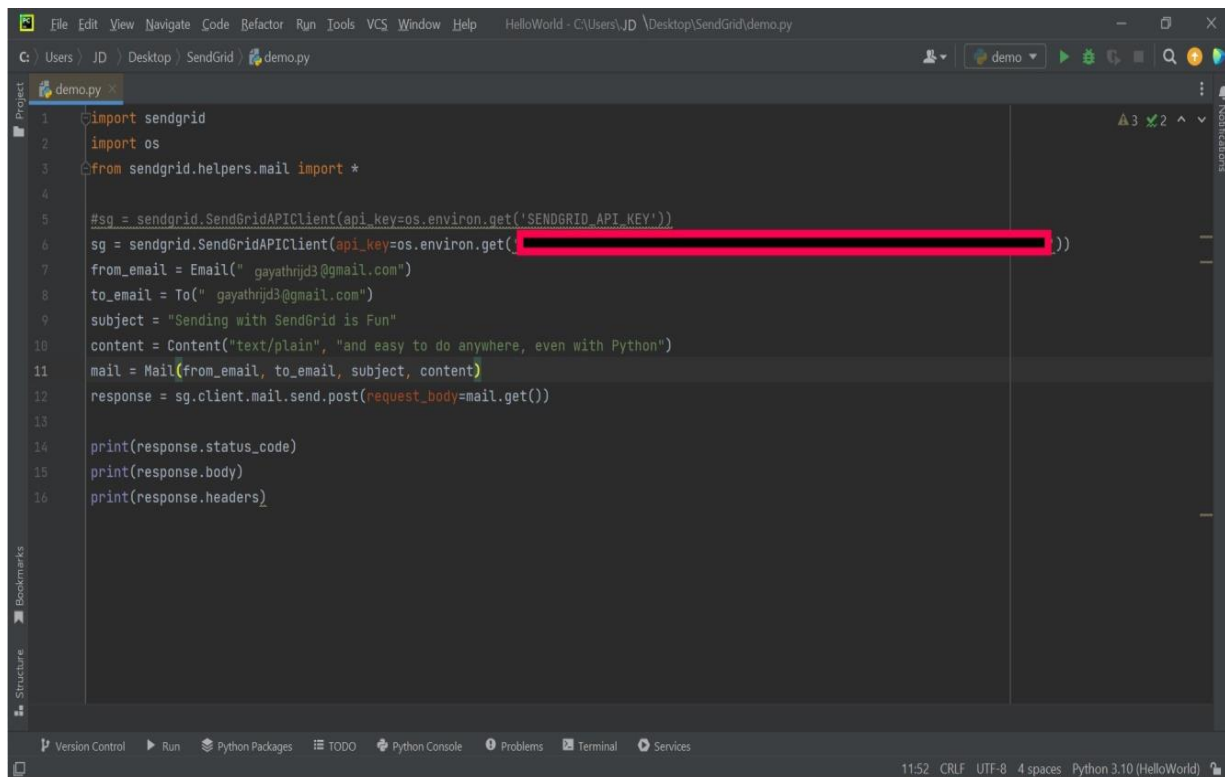

INSTALL

PACKAGE:

> pip install sendgrid

STEP 4:

SEND EMAIL

The screenshot shows a code editor with a Python script for sending an email using SendGrid. The script is as follows:

```
1 import sendgrid
2 import os
3 from sendgrid.helpers.mail import *
4
5 #sg = sendgrid.SendGridAPIClient(api_key=os.environ.get('SENDGRID_API_KEY'))
6 sg = sendgrid.SendGridAPIClient(api_key=os.environ.get('SENDGRID_API_KEY'))
7 from_email = Email("gayathrijd3@gmail.com")
8 to_email = To("gayathrijd3@gmail.com")
9 subject = "Sending with SendGrid is Fun"
10 content = Content("text/plain", "and easy to do anywhere, even with Python")
11 mail = Mail(from_email, to_email, subject, content)
12 response = sg.client.mail.send.post(request_body=mail.get())
13
14 print(response.status_code)
15 print(response.body)
16 print(response.headers)
```

The script imports the SendGrid library and the necessary helpers. It then creates a SendGridAPIClient using the API key from the environment. The email is created with a from_email, to_email, subject, and content. Finally, the email is sent using the client's mail.send.post method, and the response is printed.

SENDGRID PYTHON CODE :

```
1 import os
2 from sendgrid import SendGridAPIClient
3 from sendgrid.helpers.mail import Mail
4
5 message = Mail(
6     from_email='from_email@example.com',
7     to_emails='to@example.com',
8     subject='Sending with Twilio SendGrid is Fun',
9     html_content='<strong>and easy to do anywhere, even with
    Python</strong>')
10 try:
11     sg = SendGridAPIClient(os.environ.get('SENDGRID_API_KEY'))
12     response = sg.send(message)
13     print(response.status_code)
14     print(response.body)
15     print(response.headers)
16 except Exception as e:
17     print(e.message)
```

HTTP CLIENT PROGRAM:

```
1 """HTTP Client library"""
2 import json
3 import logging
4 from .exceptions import handle_error
5
6 try:
7     # Python 3
8     import urllib.request as urllib
9     from urllib.parse import urlencode
10    from urllib.error import HTTPError
11 except ImportError:
12    # Python 2
```

```

13     import urllib2 as urllib
